FormMail	✓	✓	✓	✓
Hit Counter	✓	✓	✓	✓
Microsoft® Frontpage® Manager	✓	✓	✓	✓
Text Counter	✓	✓	✓	✓
Guest Book	✓	✓	✓	✓
Search Engine	✓	✓	✓	✓
E-Commerce Tools				
EasyStoreMaker™	✓	✓	✓	✓
EasyStoreMaker Pro™	✓	✓	✓	✓
osCommerce	✓	✓	✓	✓
Ad Manager	✓	✓	✓	✓
Website Management Tools				
Website Promotion Wizard	✓	✓	✓	✓
File Manager	✓	✓	✓	✓
File Restore Application	✓	✓	✓	✓
Database Manager	✓	✓	✓	✓

Website Checker	✓	✓	✓	✓
Easy Site Optimizer	✓	✓	✓	✓
Security Tools				
FTP Manager	✓	✓	✓	✓
Change Password	✓	✓	✓	✓
Secure Shell (SSH)	✓	✓	✓	✓
Website Security	✓	✓	✓	✓
Secure Server(SSL) Manager	✓	✓	✓	✓
Statistic Tools				
Disk Usage Meter	✓	✓	✓	✓
Log Manager	✓	✓	✓	✓
Web Stats	✓	✓	✓	✓
Supported Software				
CGI-BIN	✓	✓	✓	✓
MySQL	✓	✓	✓	✓
Perl	✓	✓	✓	✓
PHP	✓	✓	✓	✓
ASP	✓	✓	✓	✓
ASP.net	✓	✓	✓	✓
Support for ColdFusion®	✓	✓	✓	✓
Support for JSP™	✓	✓	✓	✓
Microsoft® Access™	✓	✓	✓	✓
Support for Microsoft® SQL Server	✓	✓	✓	✓
RealAudio™/RealVideo™	✓	✓	✓	✓
General				
Same-day Set-up	✓	✓	✓	✓
24/7 Network Monitoring	✓	✓	✓	✓

Features Reference

Ad Manager	<p>Ad Manager allows users to configure an ad server for use on their website. An ad server allows users to place banner advertisements on their website, manage their advertising clients, and to collect statistics on banner "views" and "click throughs."</p>
Advanced Template Gallery	<p>The Advanced Template application is for more advanced website designers who want to use highly customizable templates that can be edited by applications such as Adobe® Photoshop®, Macromedia® Flash® MX and Macromedia® Dreamweaver® MX.</p> <p>It is recommended that beginners, or intermediate-level website designers who are not yet familiar with the required software, use EasySiteWizard™ instead. EasySiteWizard™ provides a more guided process for template-based website creation, which does not require the use of any additional software.</p>
Appointment Scheduler	<p>The Appointment Scheduler allows users or their customers to schedule appointments online. The scheduler is built through an easy-to-use wizard with the option to customize colors. Once complete, is easily linked from the user's website.</p>
ASP (Active Server Pages)	<p>This indicates a package supports ASP. Microsoft® Active Server Page (ASP) is a server-side scripting technology that can be used to create dynamic and interactive Web applications. An ASP page is an HTML page that contains server-side scripts that are processed by a web server before being sent to the user's browser. ASP can be combined with Extensible Markup Language (XML) and Hypertext Markup Language (HTML) to create powerful interactive websites.</p> <p>ASP is a feature of the Microsoft® Internet Information Server. Since the server-side script is building a regular HTML page, it can be served to almost any browser. An ASP file can be created by including a script written in VBScript or JScript in an HTML file.</p> <p>Microsoft® also offers ASP.net. ASP.net coding has all the functionality of ASP code but is more "compact". The scripts required to perform a given function are shorter in ASP.net than they are in ASP.</p>
CGI-BIN	<p>CGI Bin is an interface standard, which provides a method of executing a server-side program (script) from a website to generate a web page with dynamic content. Scripts conforming to this standard may be written in any programming language that produces an executable file, but are most often written in Perl, Python, C, C++, or TCL.</p>
Support for ColdFusion®	<p>This indicates a package supports ColdFusion®.</p> <p>ColdFusion®, is a complete Web application server for developing and delivering scalable e-business applications. The ColdFusion® solution</p>

	<p>consists of two related packages:</p> <p>ColdFusion® Studio – Tightly integrated with ColdFusion® Server, ColdFusion® Studio provides visual programming, database, and debugging tools for building sophisticated Web applications.</p> <p>ColdFusion® Server – ColdFusion® Server offers all the runtime services for delivering users' e-business applications built on a highly scalable and open architecture.</p>
Database Manager	<p>The Database Manager is a web based MySQL client that allows users to create and manipulate a maximum of two MySQL databases. If a user requires more than two databases then they may utilize a different type of database such as: MS Access or MS SQL.</p> <p>Database Manager is best used for creating databases and tables. For populating a database, users should consider using a script (PHP, ColdFusion®) or CGI.</p>
Disk Usage Meter	<p>Disk usage is the amount of space that user files have used in the home directory. Disk usage will display the total number of directories within the domain's online space and is calculated in kilobytes (KB). Disk usage also shows the entire directory paths in which files are contained.</p> <p>The report displayed within the Disk Usage Meter is in plain text within a text field that can be cut and pasted for printing.</p>
EasyBlogBuilder™	<p>The EasyBlogBuilder™ is an application that creates a utility to allow users to post "Blogs" onto their website. Designed through an easy to use wizard, the blog is highly customizable with the user's logo and preferred colors.</p>
EasyLiveChat™	<p>EasyLiveChat™ allows users to set up online chatting to handle services such as technical support and general inquiries. Up to four chat agents can be set up; each agent may handle up to four chat sessions simultaneously.</p> <p>EasyLiveChat™ includes comprehensive features designed to increase productivity, including:</p> <ul style="list-style-type: none"> • Real-time monitoring • Brandable design elements to complement any website's look and feel • Pre-defined editable messages and URLs • Customer surveys and reports • Up to four concurrent chat sessions per agent • Graphic and audio alerts • Fully searchable chat transcripts
EasySiteOptimizer™	<p>EasySiteOptimizer™ is an advanced-user tool to optimize sites for search engines. The intelligent browser-based application offers a suite of tools to select keywords for index pages, analyze site content and layout, and submit pages to today's popular search engines.</p>
EasySiteWizard™	<p>EasySiteWizard™ is an easy-to-use site-building tool that allows users to quickly create simple websites without any knowledge of HTML using a series</p>

of pre-made templates.

EasySiteWizard Pro™	EasySiteWizard Pro™ is an advanced and flexible template-based website builder that allows users to create professional-looking websites without knowledge of HTML. An easy-to-use, wizard-driven interface offers users enhanced design and editing functionality including the ability to drag and drop design elements with pixel perfect precision.
EasyStoreMaker™	<p>EasyStoreMaker™ allows users to set up a simple store on their websites, quickly and easily through an ultra-simple, user-friendly interface. Users do not need any programming or e-commerce development experience to create a store.</p> <p>Orders placed through EasyStoreMaker™ can be viewed online, giving users the ability to view the information needed to keep things organized (e.g. name, shipping address, products ordered, total price and credit card number). Users can enter product descriptions, set their own prices and tax calculations, and can select the currency their store will use.</p>
EasyStoreMaker Pro™	<p>EasyStoreMaker Pro™ enables users to set up an on-line store on their websites with a wizard style interface. The user does not need any programming or e-commerce development experience to create a store.</p> <p>EasyStoreMaker Pro™ offers multiple product catalogs, real-time credit card processing, compatibility with many major payment gateways and a page to view all online orders.</p>
File Manager	<p>File Manager allows users to take full control of their website files. It is a safe alternative to full shell access for sophisticated users. Users can copy, move, delete, rename and edit files, create and remove directories, change file permissions, and upload files from their local computer to the server.</p> <p>File Manager is best used to manipulate files that have been previously uploaded to a user's website. To upload more than one file at a time, an FTP client is generally more efficient.</p>
File Restore Application	<p>File Restore allows users to restore their website's content from a series of time-based periods (one hour, one day, etc.).</p> <p>While we highly recommend that users always keep local copies of their content, File Restore offers a convenient method for restoring it without having to use their local backups.</p> <p>This application has the potential to overwrite existing files during a restore operation. To ensure the end-user is aware of this possibility, File Restore prompts the user to confirm the details of a restore operation before restoring content.</p>
FormMail	Located within the Plug-in Scripts application, FormMail automatically sends information completed within a form via email to the email address specified by the site user.

FTP Manager	<p>FTP is a communications protocol that allows for easy, efficient, and accurate transfer of files from computer to computer across a network or, in this case, from an end user's computer across the Internet to a webserver. FTP manager is a function that allows users to control access to Directory-specific FTP and Anonymous FTP.</p> <p>FTP manager is a function that allows users to control access to Directory-specific FTP and Anonymous FTP.</p>
Hit Counter	<p>Located within the Plug-in Scripts application, Hit Counter tracks the number of people visiting a user's website each day. The counter displays graphically the number of hits the website receives. The user can opt to make the counter visible or invisible.</p>
Support for JSP™	<p>This indicates a package supports JSP™. Java Server Page (JSP™) is a technology for controlling the content or appearance of web pages through the use of servlets; small programs that are specified in the web page and run on the web server to modify the web page before it is sent to the user who requested it.</p>
Log Manager	<p>The Log Manager allows the end user to obtain raw server logs for their site activity and traffic. Users can view and/or delete, print, download, and date their log files. They may disable logging altogether to conserve their disk space.</p>
Microsoft® Access™	<p>Microsoft® Access™ is an easy-to-use program for creating and maintaining databases. The Access™ database driver for online databases is often supported by web hosts using the NT hosting platform.</p>
Microsoft® FrontPage® 2002 Extensions	<p>If users wish to use Microsoft® FrontPage® to develop their website, they must first install FrontPage® extensions using the FrontPage® Manager. The FrontPage® Manager function will automatically install the 2002 extensions.</p> <p>FrontPage® extensions are particular elements that need to be installed into a user's home directory that enables features that are created within Microsoft® FrontPage® to function correctly.</p>
Support for Microsoft® SQL Server	<p>MS-SQL (Microsoft® SQL) Extensive database programming capabilities built on web standards. Rich XML and Internet standard support give you the ability to store and retrieve data in XML format easily with built-in stored procedures. You can also use XML updategrams to insert, update, and delete data easily.</p>
MySQL	<p>MySQL is an Open Source Database, designed for speed, power and precision in mission critical, heavy load use.</p>
osCommerce – Templates and Support Applications	<p>This product features a gallery of professionally designed templates for online stores built using the popular osCommerce application. The suite of support apps also includes a built-in osCommerce installation wizard along with a tool that automatically configures the user's MYSQL database for use with their store.</p>
Perl	<p>Practical Extraction and Reporting Language is a programming language often used for creating CGI programs.</p>

Photo Album	<p>The Photo Album makes it easy for users of any level to set up an online photo gallery. Administered through a simple and easy-to-navigate interface, users can create and publish individual albums of specific events, linking to album from their core website or promoting individual album addresses.</p>
PHP	<p>PHP is a server-side scripting language. The PHP commands, which are embedded in the web page's HTML, are executed on the web server to generate dynamic HTML pages.</p>
RealAudio™/ RealVideo™	<p>This indicates a package supports RealAudio™ and RealVideo™ content on sites. Real Audio™ and Real Video™ is a client-server software system and file format(s) that allows Internet users to play audio and/or video-based multimedia content in real time as they are being downloaded (called "streaming media"), instead of the user having to download the complete file before being able to play it.</p>
Secure Socket Layer (SSL)	<p>SSL is abbreviated for Secure Sockets Layer. SSL works by using a private key to encrypt data that is transferred over the SSL connection. Many websites use the protocol to obtain confidential user information, such as credit card numbers. The convention of the secure URL is: https.</p> <p>The SSL Manager application helps users set up SSL security for their website. This application will allow users to choose between using our generic SSL certificate, or creating one of their own.</p>
Secure Shell (SSH)	<p>Secure Shell, or SSH, is a UNIX-based command interface and protocol for securely accessing a remote computer. It is frequently used as a secure method to remotely access and manipulate files directly on a website.</p> <p>SSH uses a "command-line" interface, similar to DOS. A command-line interface does not use a GUI (Graphical User Interface); instead, all commands are typed at a command prompt in a special terminal window.</p>
Web Stats	<p>Web Stats is a web server log file analysis program. It produces usage statistics from a user's website server logs. This information details the traffic on the website and where it is coming from.</p>
Website Checker	<p>The Site Checker function allows users to:</p> <ul style="list-style-type: none"> • View the structure of their website • Check their pages for broken links • List links pointing to external sites • View their website images • Get a run-down of problems sorted by author • Locate pages that may be slow to download • Show new and old pages • Show pages that have no title • Show links that are not checked
Website Promotion Wizard	<p>Site Promoter is a utility that gives users the ability to automatically send promotion material to select search engines to gain placement for their website in the search engine's rankings.</p>

Website Security

Website Security is an application that restricts access to certain areas within the user's website. These areas are protected by Hostname, IP address, or username and password.

A hostname is a unique name that would identify a computer through a network, and is known as site name. An IP Address is abbreviated for Internet Protocol, which identifies the sender and receiver of information across the Internet.

Web Storage

Disk space refers to the amount of storage space allocated to building your Web site. This space stores HTML, graphic, audio, and any other files that make up your Web site. Storage of this information is referenced in terms of bytes and the amount of server disk space required depends on the size of your Web site files.

Web Transfer Limit

Web Transfer Limit refers to the amount of information that users browsing the Internet download from a Web site. Whenever someone enters your Web site or views additional pages within your site, information is downloaded to the user's computer. These downloads are continuously recorded to determine the amount of data transferred from your Web site every month, so the size of a file or Web site affects monthly data transfer limits. A Web site that is graphic rich, contains downloadable software, audio or video files contributes more quickly to monthly data transfer allowance than a site that contains mainly text.
